Executive Summary

The Central Florida Expressway Authority (CFX) system includes 118 centerline miles (including the new Wekiva Parkway and SR 453), 815 lane miles (including ramps), 69 interchanges, 335 bridges and 17 mainline toll facilities. CFX's system includes SR 408 (Spessard L. Holland Expressway and Arnold Palmer Expressway), SR 528 (Martin Andersen Beachline Expressway), SR 417 (Central Florida GreeneWay), SR 429 (Western Beltway and Wekiva Parkway), SR 414 (Apopka Expressway), SR 451 and SR 453. On average, over a million toll transactions are recorded every day. CFX is authorized to build, operate and maintain a transportation facility in Central Florida, incorporating Lake, Orange, Osceola and Seminole counties. On July 1, 2017, by order of the Florida House Bill 299, the geographical boundary of Brevard County was added to the area served by the CFX. This five-county region has more than 3 million residents and over 68 million visitors annually.

"To provide the region with a world-class, integrated mobility network that drives economic prosperity and quality of life"

Vision Statement

Towards the goal of a world-class system, and the strategic priority to build a customer-driven organization, CFX prepares this manual to provide a complete set of data relating to traffic volumes, traffic characteristics, toll facility operations and interchange lane configurations for their system. This data is utilized to project traffic trends and identify future capacity improvement projects within the system that can then be included into the Five-Year Work Plan.

In the last year, overall traffic increased on the system by 7.7%. Mainline volume changes range from -1.3% to 28.5%. Of particular interest are the segments of roadways at the ends of the spectrum:

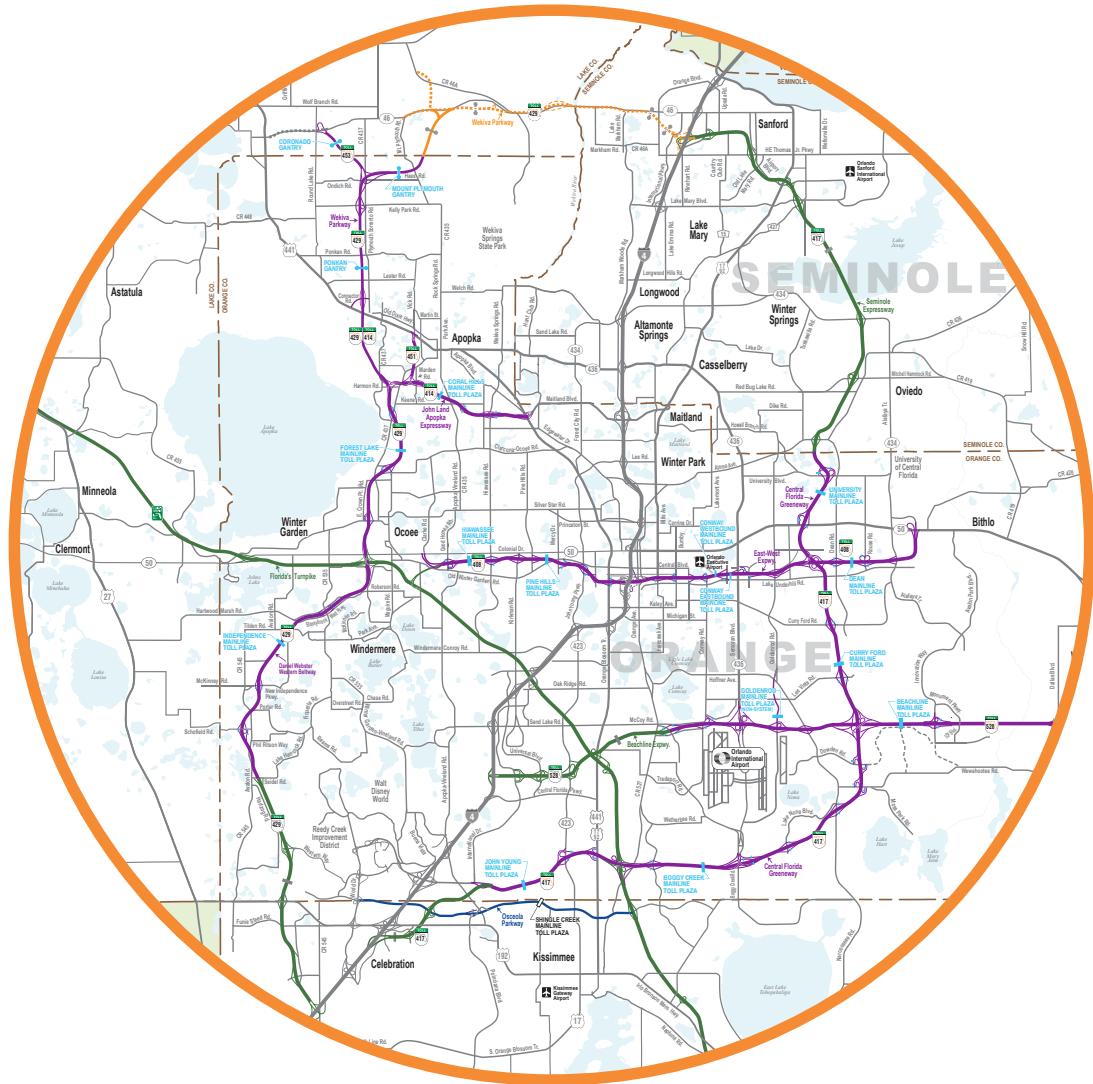

- SR 408 (Interstate 4 to Alafaya Trail) average growth of less than 2%
- SR 528 (Boggy Creek Road to Tradeport Drive) only segment of roadway with a decrease in volume at -1%. This segment of roadway has been under construction by CFX since 2015 and by Florida's Turnpike since 2017. The tolling scheme was also modified from mainline tolling to ramp tolling.
- SR 417 (International Drive to Landstar Boulevard) over 20% growth
- SR 417 (South Access (OIA)/Boggy Creek Road to Lake Nona Boulevard) 19% growth
- SR 429 (Seidel Road to CR 535) over 19% growth

The Orlando Metropolitan area (Lake, Orange, Osceola and Seminole counties) is expected to continue to grow at a rate above national average. Based on the 2017 U.S. Census, for the second year in a row, the Orlando Metropolitan area was ranked number eight in the country for growth at approximately 2.3%. According to the Orlando Sentinel, Osceola County is the second-fastest-growing county in the state, just behind Walton County, and was ranked tenth in the nation.

The data collected and detailed in this report is a snapshot in time. It should be noted that this data varies with time due to a number of influences. Factors such as construction and weather can affect the routes that drivers choose to travel. Some of the activities controlled by CFX that may influence traffic data include:

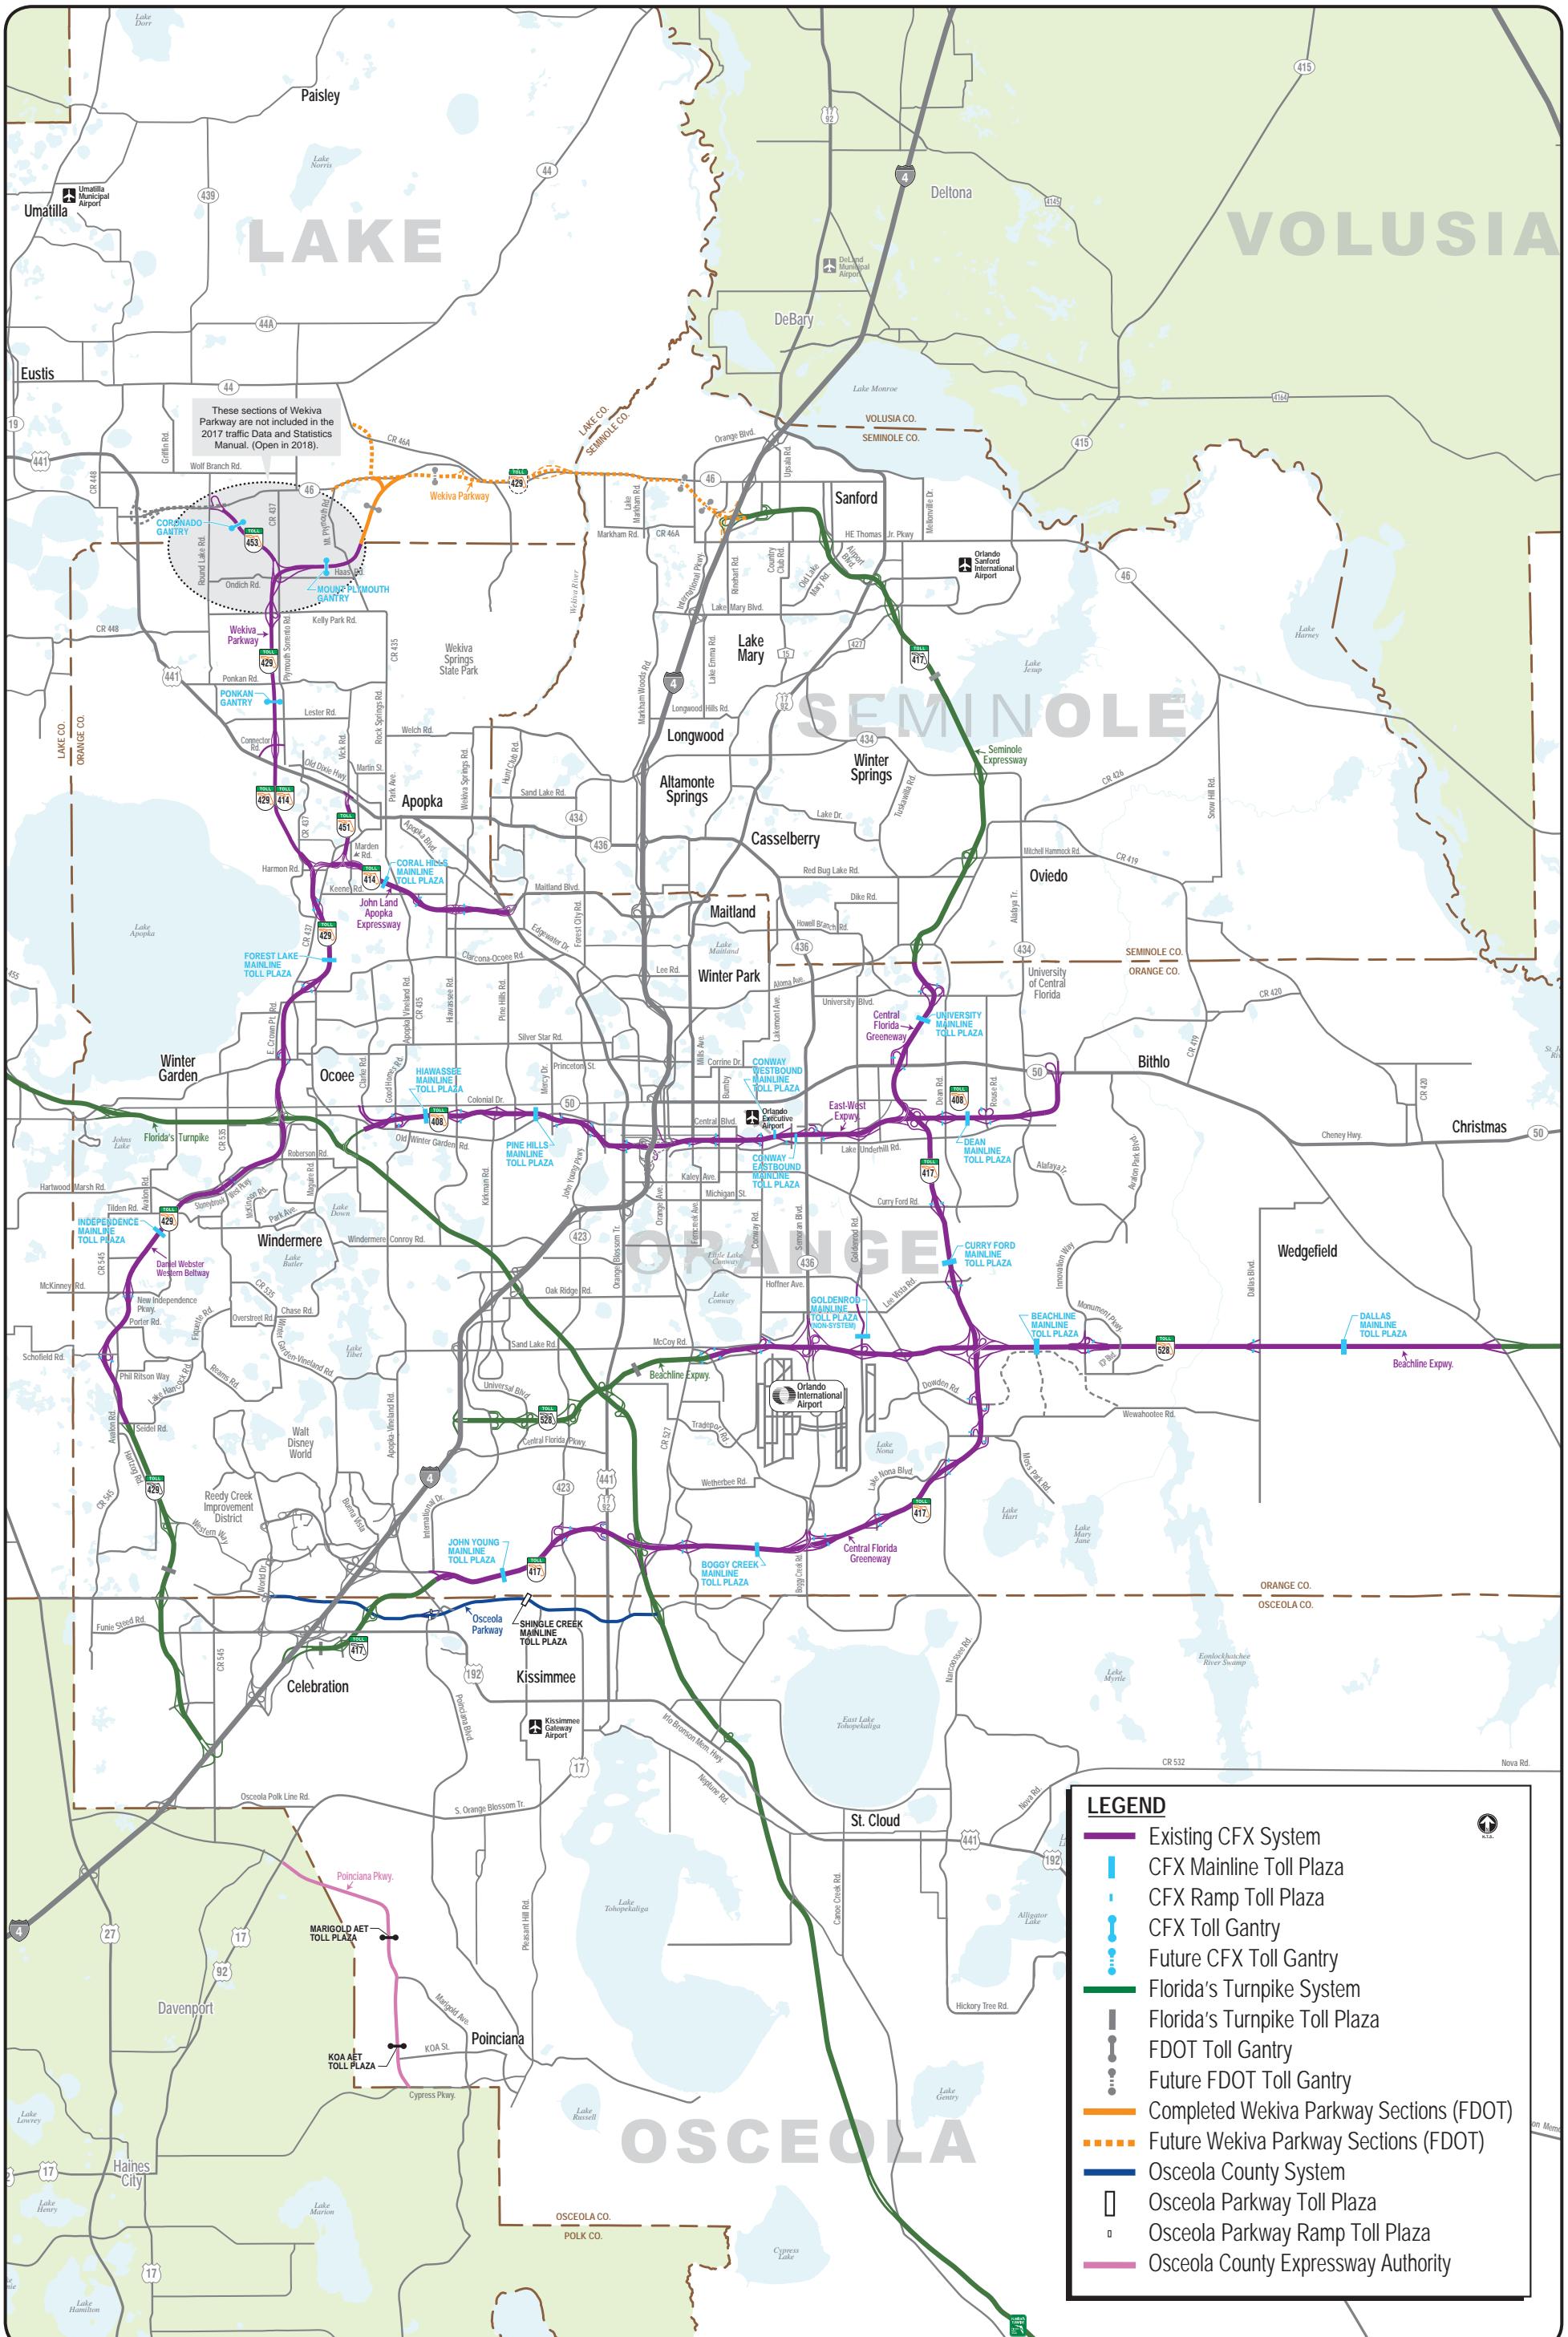

- Expansion Projects
 - SR 429 (Wekiva Parkway)
 - SR 453
- Existing System Capacity Improvements (Complete and Under construction)
 - 253F SR 408 / SR 417 Interchange Improvements Phase I

 - 528-313 SR 528 / Innovation Way Interchange
 - SR 417 / Florida's Turnpike Interchange Improvements (By others)
- Toll Suspensions
 - Due to Hurricane Matthew, tolls were suspended from 10/5/16 through 10/10/16
 - Due to Hurricane Irma, tolls were suspended from 9/5/17 through 9/20/17
- Toll Rate Changes
 - FDOT toll rate increase of \$0.25 for cash payment at the Dallas Mainline Toll Plaza October 2017

The data collected in April 2017 and October 2017 is summarized in the following sections.

Section II: Traffic Counts

2017 Traffic Data and Statistics Manual
CENTRAL FLORIDA EXPRESSWAY AUTHORITY

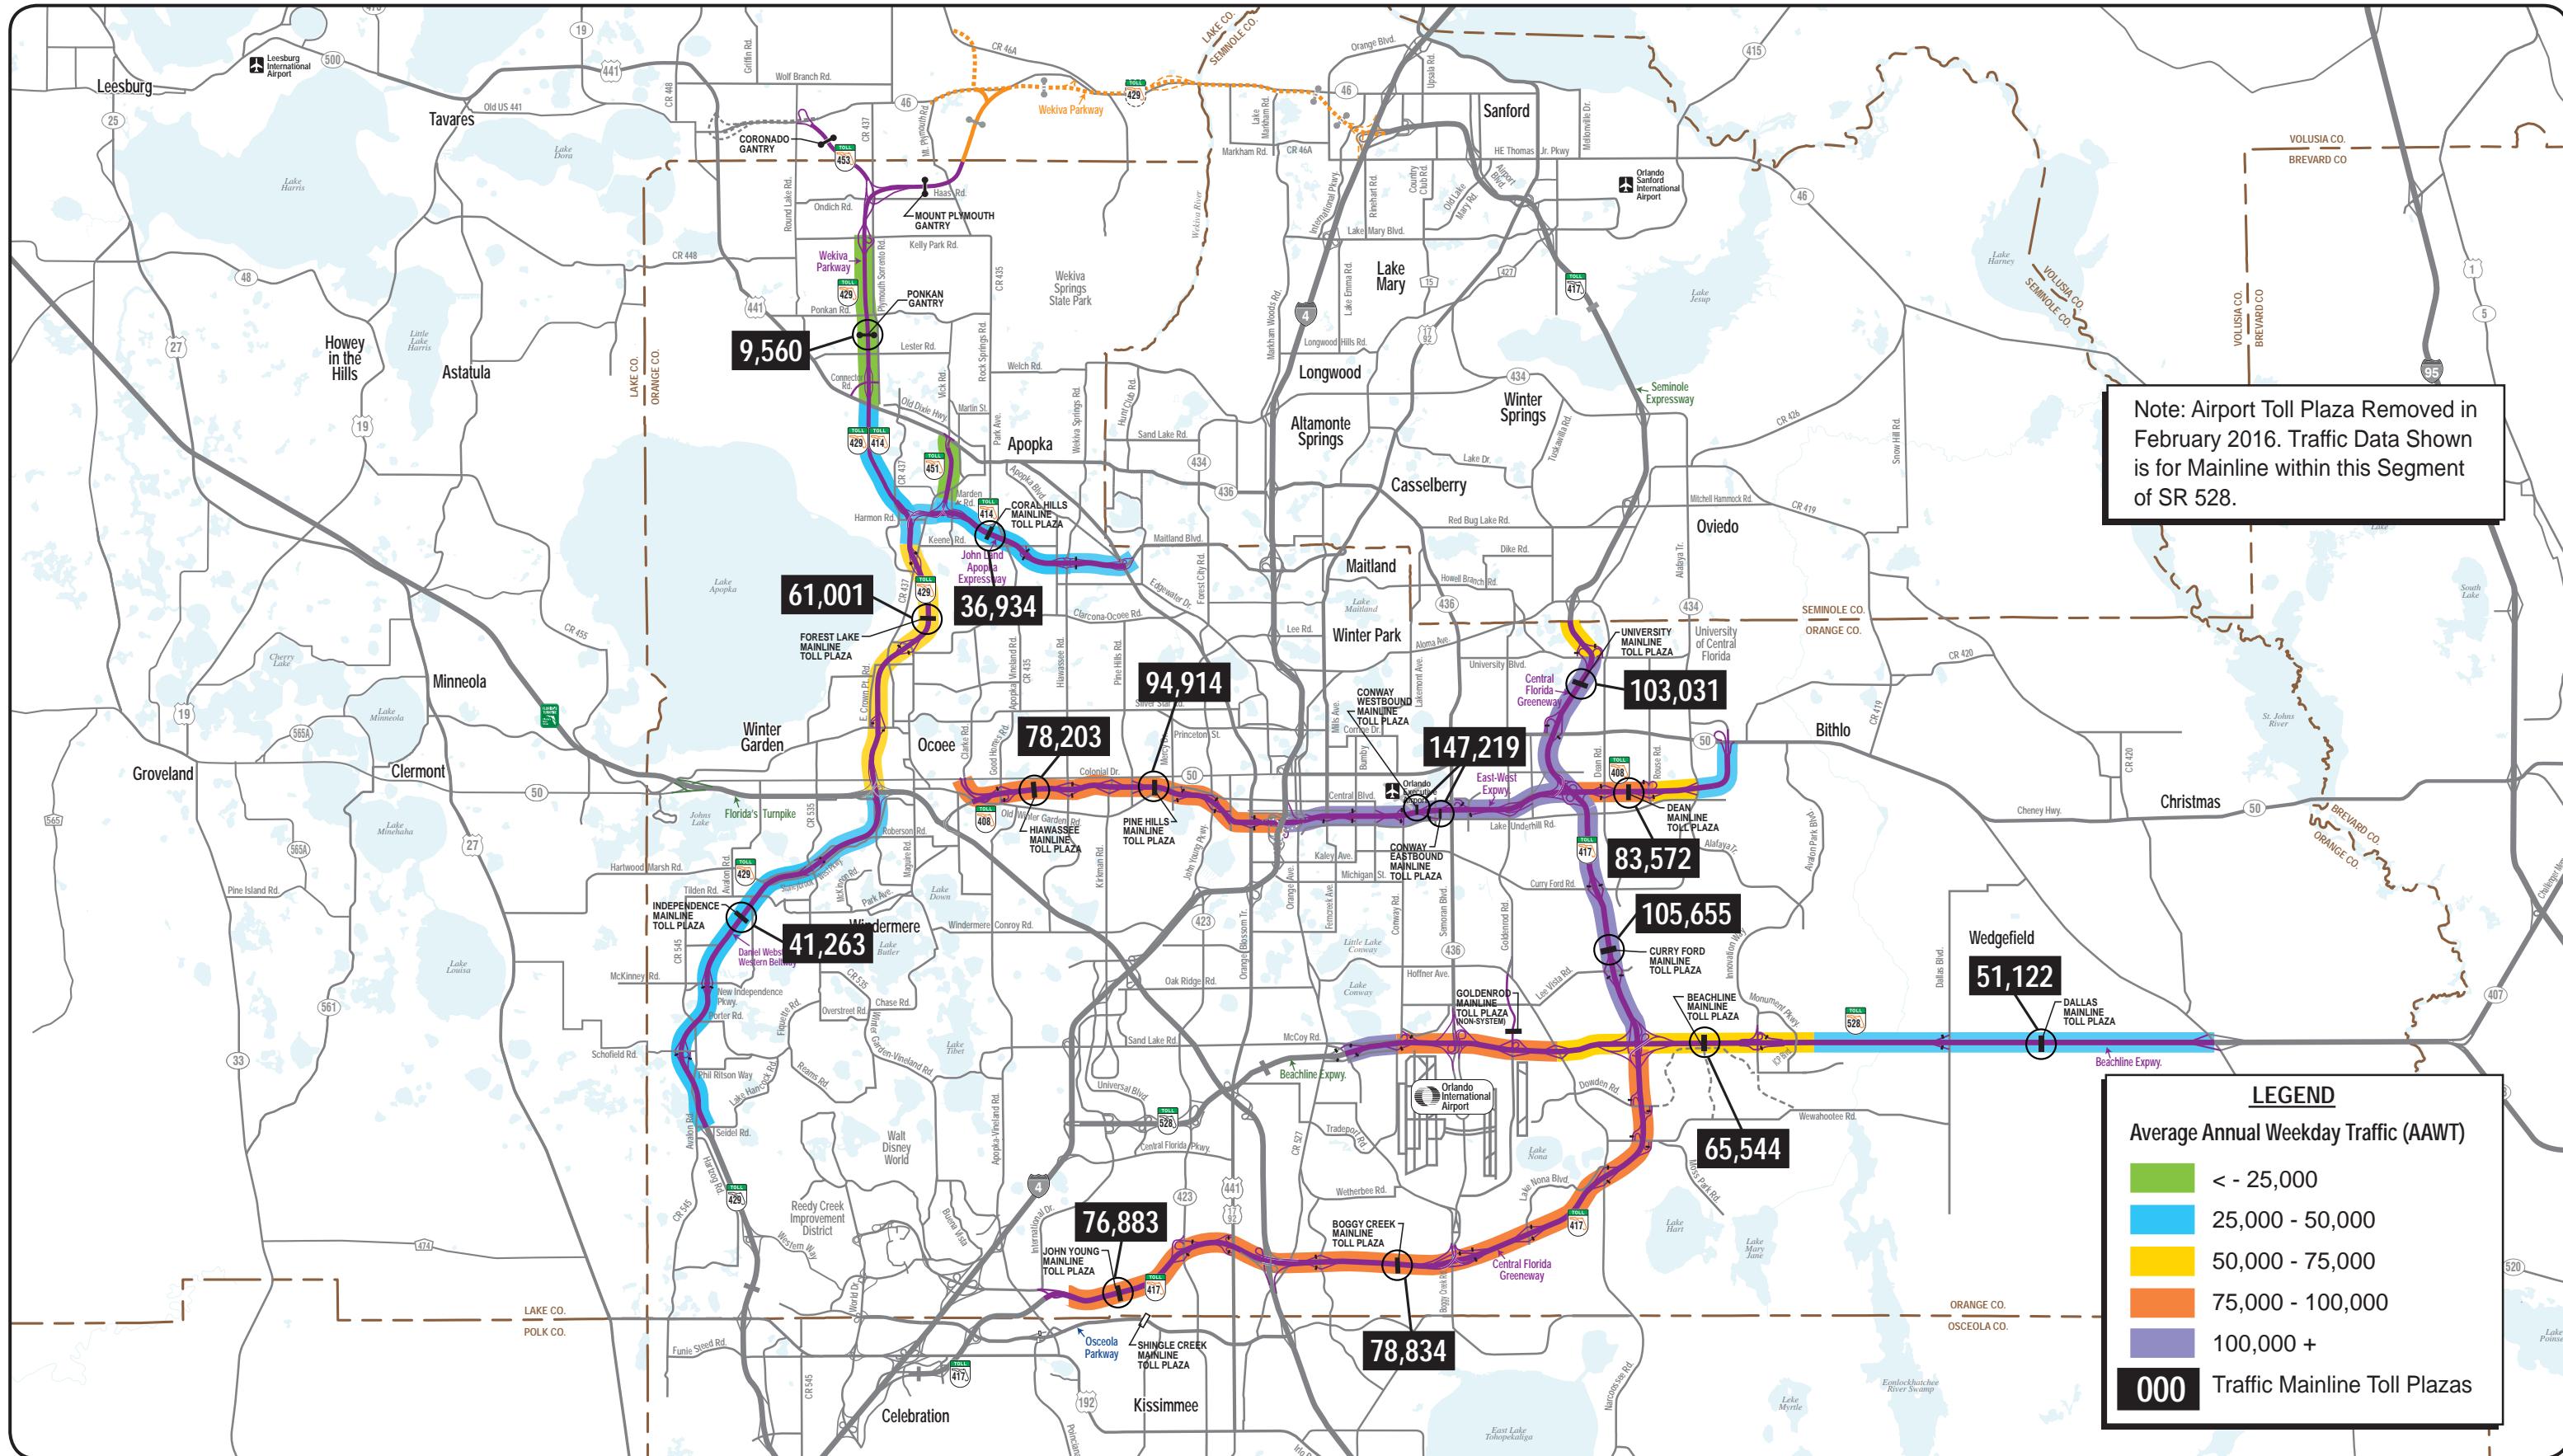

Traffic Counts Introduction

Traffic data was collected for Monday thru Friday for the entire month of April 2017 utilizing the Wavetronics Data Collection Sensors (SS125 HD) recently installed throughout the CFX system. Traffic data was also collected for October 2017 utilizing the Wavetronics Data Collection Sensors (SS125 HD) and Toll Plaza data was collected for April 2017. Traffic data collected at the ramp and mainline toll plazas for the same five days is also utilized to calculate the Average Annual Weekday Traffic (AAWT). The data collection for this manual was completed during the month of April 2017 at the appropriate interchange ramp and mainline locations.

Monthly adjustment factors used to convert 24-hour weekday traffic counts to AAWT, are presented for each mainline segment and their accompanying ramps. These factors are based on the daily transaction information received from CFX for the mainline toll plazas monthly transaction records for the most recent year unaffected by toll adjustments and major system additions. For example, if a 24-hour roadway count is collected on a normal weekday in April at a certain location, then that count would be multiplied by the appropriate monthly (April) factor to convert it to an average annual weekday volume. This normalizes the variations in weekly and monthly traffic so that counts taken at different times in the year can be compared.

The following pages contain estimates of AAWT for all mainline sections, and ramps associated with the CFX system facilities. The data includes the most recent observations, as well as historical traffic volumes starting from the year 2007 (where applicable).

Systemwide Adjustment Factors

2017 Traffic Data and Statistics Manual
CENTRAL FLORIDA EXPRESSWAY AUTHORITY

Weekday, Daily and Monthly Adjustment Factors

Annual Average Weekday Traffic (AAWT) is the estimated volume of traffic on a highway and/or expressway segment for five (5) days of the week (Monday through Friday) that is obtained from collecting 24 hour, 72 hour traffic counts and/or monthly traffic counts and adjusting these collected weekday traffic counts by utilizing the developed daily and monthly seasonal adjustment factors.

All weekday traffic volumes collected must be adjusted to reflect the seasonal changes in traffic volumes. In order to calculate the AAWT and AADT, monthly seasonal adjustment factors are calculated from each of the mainline toll plaza transactions for each month of the year. These numbers are then used to convert the twenty-four hour Weekday Traffic Counts to AAWT.

In addition to developing the AAWT, seasonal adjustment factors and a conversion factor to calculate the Average Annual Daily Traffic (AADT) are also tabulated. The AADT is the estimated daily traffic volume on a highway and/or expressway for all days of the week, (Monday through Sunday) over the period of one year. The AADT is obtained by taking similar adjustment factors developed from the mainline and ramp toll plaza transactions and applying those factors to the same twenty-four hour weekday traffic counts. This calculated conversion factor is used to convert the AAWT to AADT by multiplying the appropriate factor to the corresponding AAWT to obtain the AADT traffic volume.

The following tables summarize the daily and monthly adjustment factors for the Central Florida Expressway Authority's expressway system. Note that these adjustment factors are based on the year 2017 mainline toll plaza transactions and accounts for the number of weekdays, weekends and holidays occurring each month.
