Notes:

- 2 Floodplain involvement based on GIS data only and doesn't include minimization efforts to reduce direct ROW impacts.
- 3 Wetland values based on FLUCCS and limited review of permits. No wetland survey was conducted during Tier 2. Wetland impacts do not include minimization efforts to reduce direct ROW impacts.
- 4 Limited observation data available due to undeveloped nature of the study area. Species habitat identified based on FLUCCS and typical habitat for gopher tortoise, caracara, snail kite, grasshopper sparrow, scrub jay, red cockaded woodpecker, wood stork, eagle nest, Florida panther, and black bear. Telemetry data indicates the presence of the Florida panther 2,100 feet west of the Florida's Turnpike; however, the panther is absent within all of the corridors. Additionally, the corridors are not within the focus area which includes the primary and secondary zones. Black bear are "occasional" throughout the corridors and not within the primary range of the black bear.
- 5 Lake X Conservation Area, which is also within a mitigation bank.
- 6 Values do not include overlap areas designated as mitigation bank.
