Florida Forever Priority Projects (Planned)[6]	Acres	73	83	87	89

Notes:

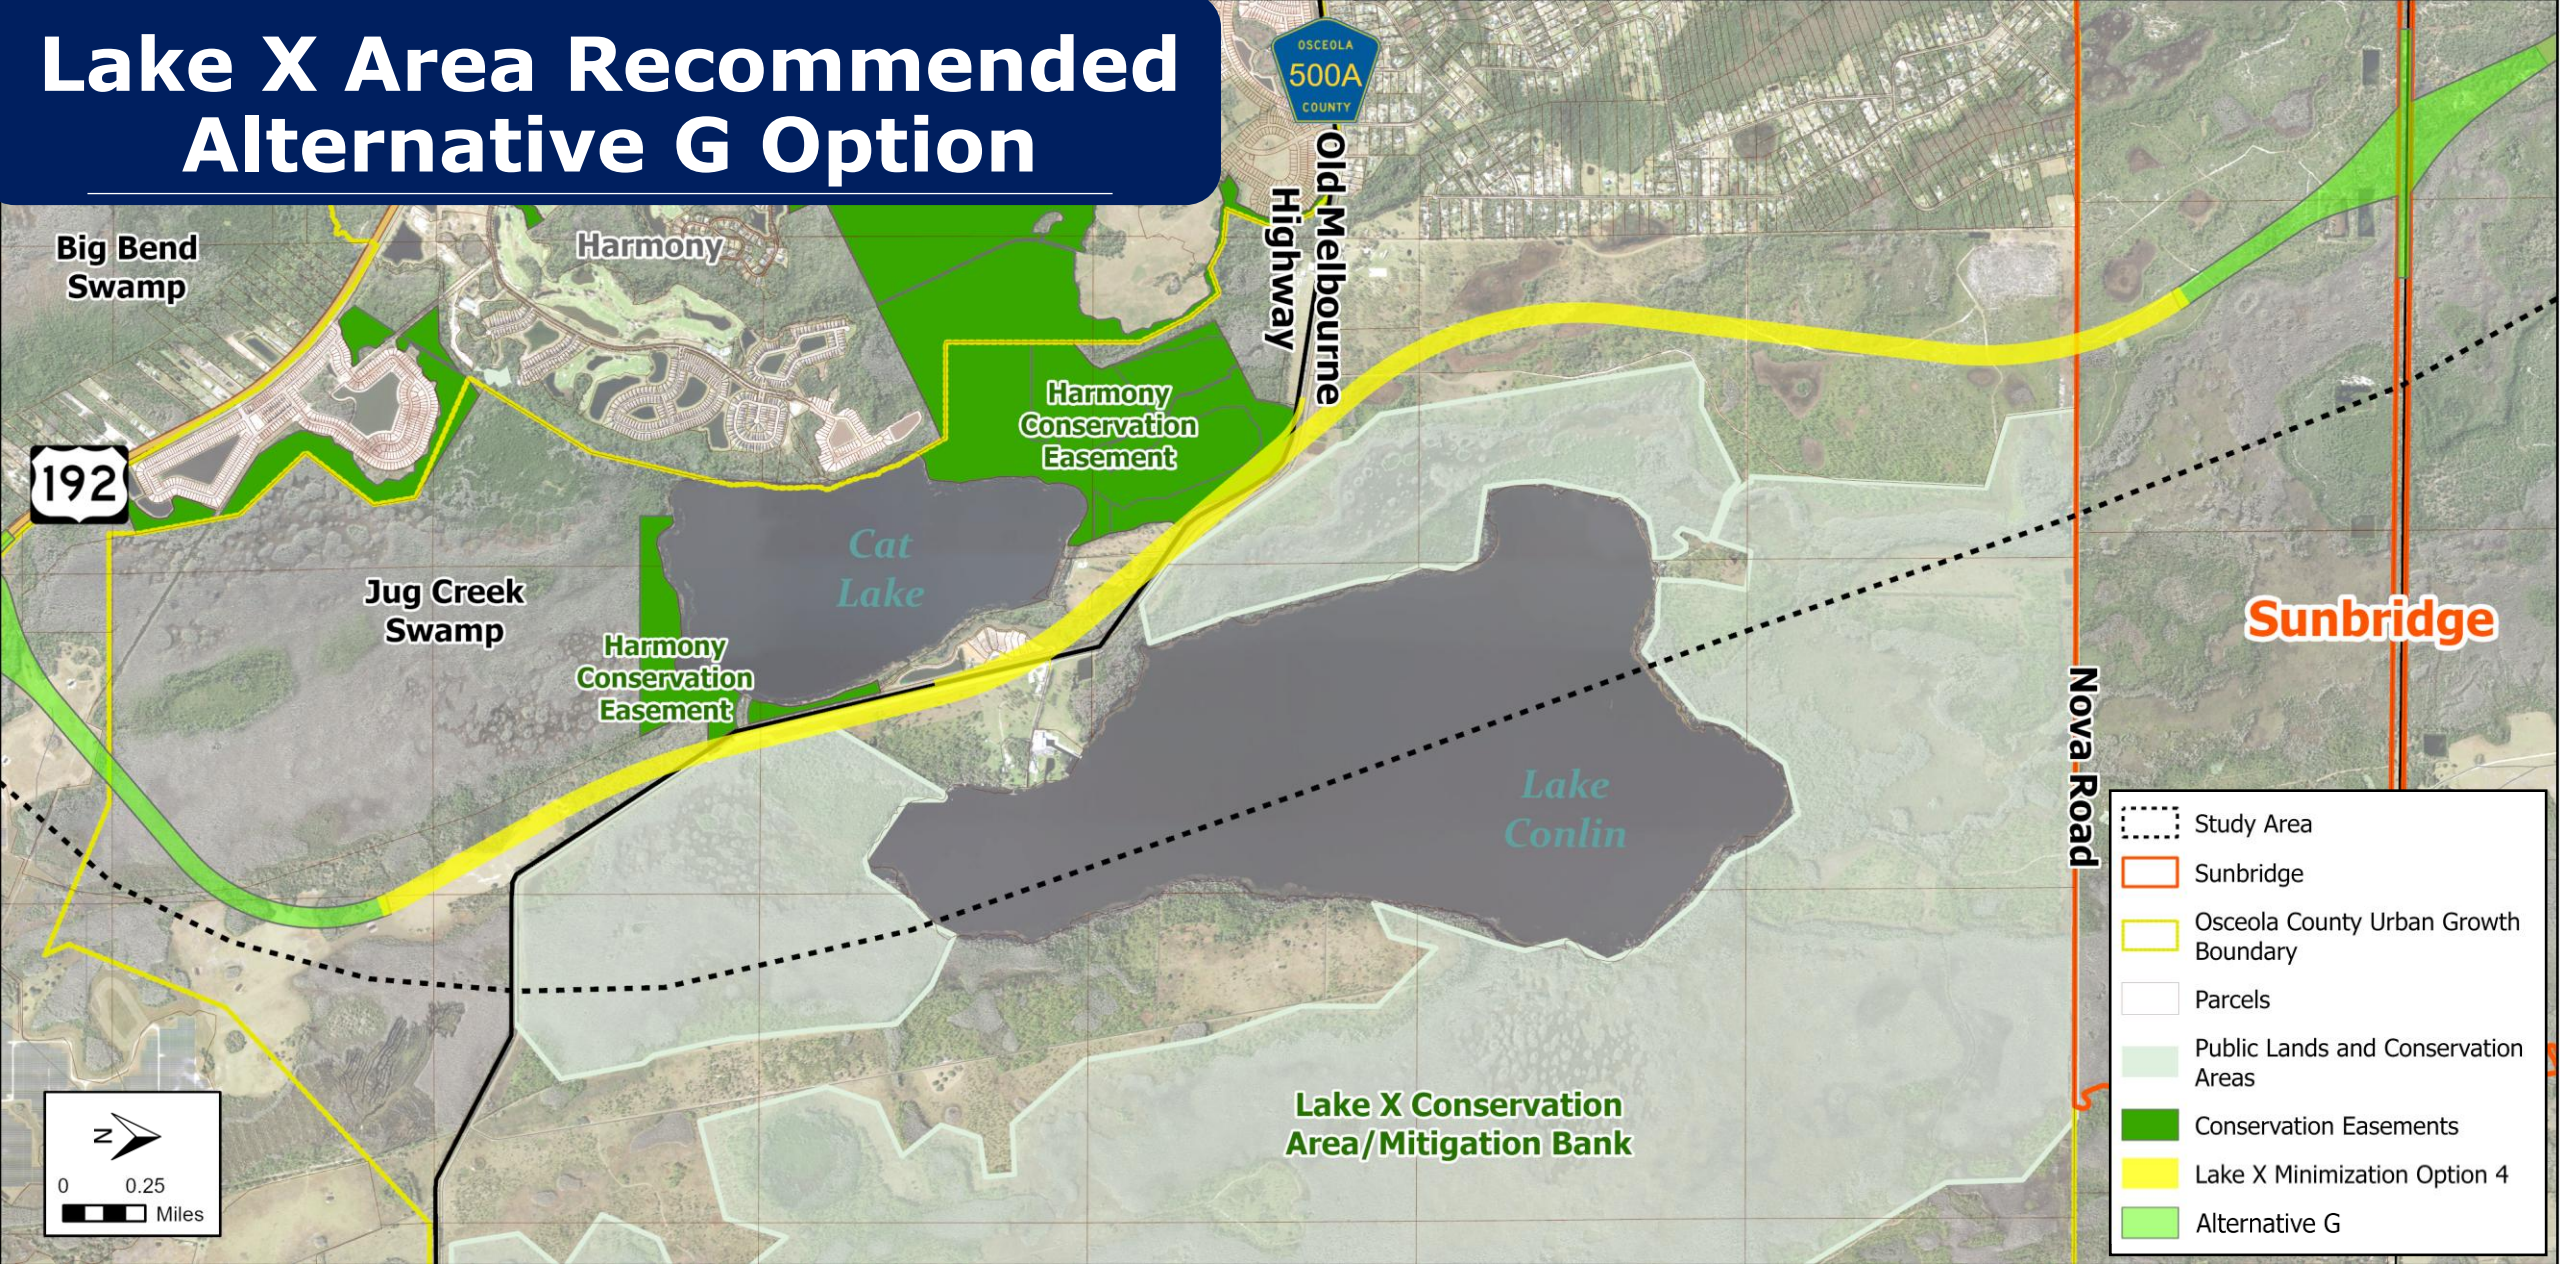

2. Floodplain involvement based on GIS data only and doesn't include minimization efforts to reduce direct ROW impacts.
3. Number of conflicts are identified; however bridges are assumed for all crossings.
4. Wetland values were derived based on FLUCCS and refined using approved wetland boundaries from the WMD, as well as available DEM and LiDAR data. No field-based wetland survey was conducted. Wetland impacts do not include minimization efforts to reduce direct ROW impacts.
5. Limited observation data available due to undeveloped nature of the study area. Species habitat identified based on FLUCCS and typical habitat for gopher tortoise, caracara, snail kite, grasshopper sparrow, scrub jay, red cockaded woodpecker, wood stork, eagle nest, Florida panther, and black bear. Telemetry data indicates the presence of the Florida panther 2,100 feet west of the Florida's Turnpike; however, the panther is absent within all of the alignments. Additionally, the alignments are not within the focus area which includes the primary and secondary zones. Black bear are "occasional" throughout the alignments and not within the primary range of the black bear.
6. Values do not include overlap areas within Lake X Ranch.
